

# Import - option Read from GDS/OBE

## Please Note:

- It is the responsibility of the profile administrator to control and verify that all the data have been correctly imported before saving/ updating/ mass-publishing the profiles again to the GDS as this can cause none imported data to be overwritten!
- Also, when downloading a CSV, one has to wait until the "rotating" download indicators stops rotating before opening the file
- In the downloaded CSV File, one should control if all the profiles imported have the **status** "read from GDS OK" or similar. If there are profile missing this information then they have not yet been fully pulled in from the GDS/ OBE. The profile manager has to wait before extracting the CSV to control if all the data and all the profiles have been successfully imported
- The profile administrator should report any error messages that appear under status and that he himself is not in the capacity to resolve to our support team

## Import

Clicking on "Import" will upload the company and all associated traveller profiles.

For Sabre and Amadeus, the username for the traveller profile will be automatically created as <first name>.<sure name>@<company short name> .

For Galileo the username for the traveller profile will be automatically created as <PAR Name Title>@<BAR Title>.

For Get There the relevant OBE Username will be set as the Faces username too.

The following Amadeus CSX prefix can be processed:

- AB
- AM (Traveller only)
- AP
- APE
- ES
- FFN
- FP (if Amadeus Local Security Sign is set PCD-Y)
- FPO/
- FK
- FT
- FZ
- NM
- OS
- PAS
- PBD
- PCI
- PCZ
- PID
- PIV
- PHI
- PN
- PPR
- PPT
- RM
- RC
- RX
- RM (category e.g. RMA/)
- RIR
- RIZ
- SR DOCS
- SK
