

Atlasos Configuration

For Atlasos to be able to activate the synchronization to Faces, the agency needs to provide them with the following information:

- Agency Key
- Agency UUID
- Push Key
- Password

All the above information will be provided by Umbrella Support upon request.

After Atlasos confirms that the setup is ready on their end, the Agency has to give Umbrella a green light so that Atlasos interface is activated on their Agency.

Below is an Atlasos documentation guideline:
