Release Note 02. June 2021

Use as form of payment/publishAsFop for multiple credit cards

We improved the process of credit card use as form of payment synchronization.
Previously, if multiple credit cards stored in Umbrella Faces were present with publishAsFop=true, it would not be possible to reset publishAsFop to false using the API. With this release, Umbrella Faces will always update all publishAsFop flags according to the request JSON.

Note: This only applies for requests directed to Umbrella Faces. Requests originating from Umbrella Faces have not changed.

Example JSON:

```
"creditCards": [{
    "number": "444433KIFOXD1111",
    "type": "VI",
    "expiration": 1640991599000,
    "publishAsFop": true,
    "remark": ""
}, {
    "number": "424242SKMPRI4242",
    "type": "VI",
    "expiration": 1640991599000,
    "publishAsFop": false,
    "remark": ""
}],
```

Example UI:
