Release Note - 15. February 2022

Emergency Contact

By making arranger and approver details available in the on-demand API, we moved the emergency contact to the same section 'data.contacts.emergencyContact'.
Currently, emergency contact details are shown in the old 'data.emergencyContact' as well as the new 'data.contacts.emergencyContact' section.

```
    },
    "contacts": {
        "emergencyContact": {
            "firstname": "John",
            "lastname": "Smith",
            "phone": "+41449335390",
            "email": "john.smith@umbrella.ch"
        },
        "arrangers": [],
        "approvers": []
    },
    "emergencyContact": {
        "firstname": "John",
        "lastname": "Smith",
        "phone": "+41449335390",
        "email": "john.smith@umbrella.ch"
    },
```

We are going to remove the old 'data.emergencyContact' section on April 30th, 2022.

If you are using emergency contact details, we kindly ask you to perform the necessary changes until end of April latest.

Profile Sections handling

The API calls for retrieving a company and/or traveller profile utilize a concept of information-sections, which allows for clients to fetch only the data specifically needed for processing instead of the complete profile.
So far, these API calls have defaulted to returning all available data if the sections parameter has been omitted.

As more and more sections are being made available, we will change the default behaviour.
Starting on May 31st, 2022 we will only return sections that have been explicitly requested in order to cut down on the amount of unnecessary data being exchanged between systems.

Affected API calls

Only the following API calls are affected by this change:

- GET /api/v1/profiles/company/{uuid}
- GET /api/v1/profiles/traveller/{uuid}
