

Release Note - 29. August 2022

Concur Polling with Travelconfig Id

We improved the Concur polling solution to include the Travelconfig ID at time of polling request. This allows Umbrella Faces to better identify the profiles which needs to be updated.

Please be aware about the following changes:

Old function	New function
Request only includes Refresh Token	Request includes Refresh Token with the Faces stored Travelconfig IDs
No Email Notification/Error message if invalid Travel Config Id are stored in Faces	Email Notification/Error message in case invalid Travel Config Id are stored in Faces. <i>Task: get profile summary: Unexpected response status : HTTP/1.1 500 Internal Server Error*</i>

*we will look to further clarify the detail within the error message within a future release

Note: No profiles will be imported in case one Travel Config Id is invalid for one Refresh token. Please make sure that you do not have invalid Travelconfig Id stored in your Faces environment.
