

# Release Note - 23. February 2023

## Masked Credit card number - CSV File & UI Display

The CSV export will now include masked credit card numbers. Due to PCI DSS regulation it will still not be possible to upload credit card numbers via CSV import.

### Example CSV export

sortedCreditcards0.type	sortedCreditcards0.numberMasked	sortedCreditcards0.expiration
Credit cards / Form of payment	Credit cards / Creditcard no.	Credit cards / Expiration
VI	4444 XXXX XXXX 1111	01.10.2025

**Note:** The CSV import including new header "sortedCreditcards0.numberMasked" will not modify the credit cards. Please be aware, if the masked number is manually removed (empty in header) from the CSV the credit card will be deleted in the profile

The display in the Faces UI for company and traveller will also be slightly changed. The credit card token will be only visible at time of entry, after saving the profile the credit card number will be masked

old UI display	new UI display
<p>Creditcard no. <input type="text" value="44443351kl2J1111"/></p>	<p>Creditcard no. <input type="text" value="4444 XXXX XXXX 1111"/></p>

## Concur Source - Manager Email

A new source has been created and can be used in the agency configuration.

Concur field	Source
Manager Email Address	ManagerEmail <i>The source is only valid for read only. The Manager Email Address will be imported from Concur but not exported from Faces to Concur.</i>

## Sabre Rail Mapping Change for SNCF Eurostar Frequent Traveler

The mapping from Faces to Sabre for Rail Loyalty card has changed from Sabre Rail code 2C to 9F.

old mapping	new mapping
<p>Vendor Code: <input type="text" value="2C - SNCF FRENCH RAILWAYS"/></p>	<p>Vendor Code: <input type="text" value="9F - EUROSTAR"/></p>

## Deem - Warning Messages

When a profile is created and/or updated in Faces which is missing information expected, but which does not prevent successful creation/update within Deem, the profile will return an OK status in Faces and display the warning. All other profile content will be updated with the exception of the field(s) that are missing/invalid. In the case of a new profile creation the Profile no. field is also now returned.
